

NMR Pipetector

Letters of recommendation

By the Guildhall London:

“The installation of the NMR Pipetector on our West Wing Domestic Hot Water Services has resulted in the quality of the water supply to improve and the parts per million amount of iron and corrosion in the system has been reduced by up to 99%. This has also reduced the need to replace certain sections of the buildings water systems pipework and also the efficiency of the system has improved. The effect the NMR had on the system was evident after just 4 weeks and the previous incidents of brown water coming from the system in a high profile part of the Guildhall Complex had now also been eradicated.”
